Business Question:

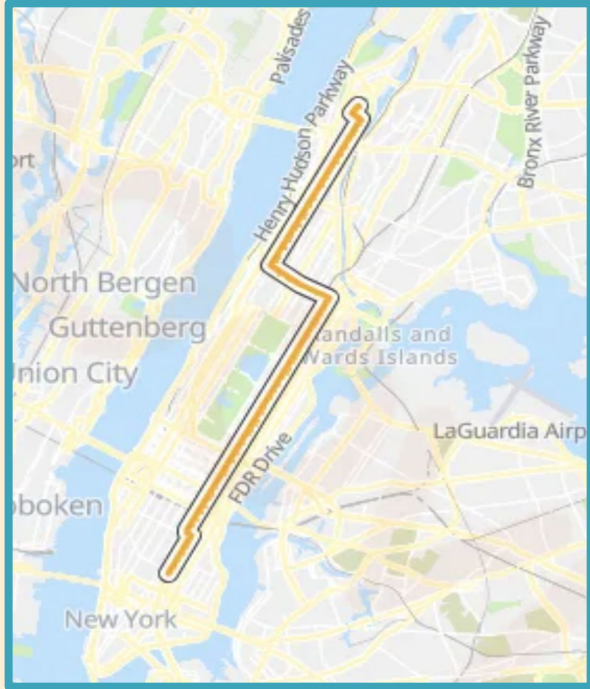

“Some vehicles stopped in violation are exempt from fines due to business reasons. For vehicles that are exempt, are there repeat offenders? Where are exempt vehicles frequently in violation?”

What we decided: M101 Route

Why?

- A route often used by CUNY students
- One of Manhattan's busiest north-south bus routes, connecting Harlem, the Upper East Side, Midtown, and more
- This route is ACE-enforced

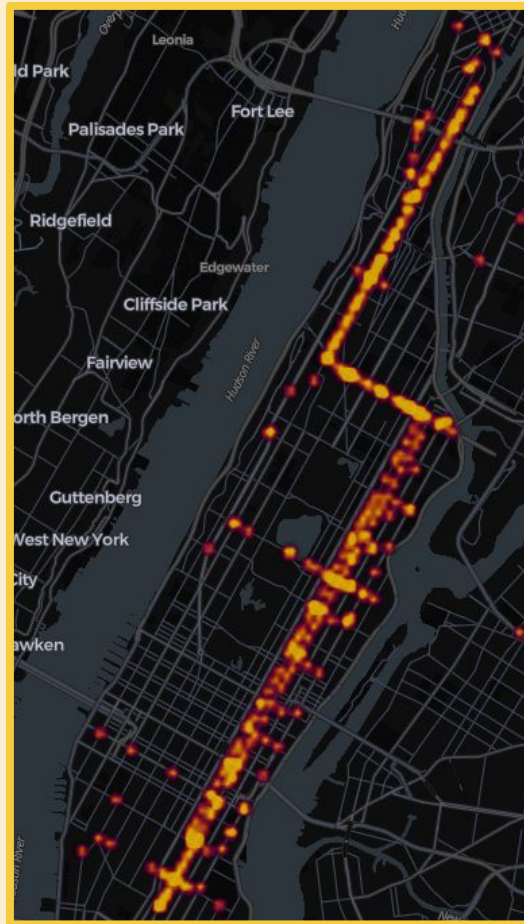

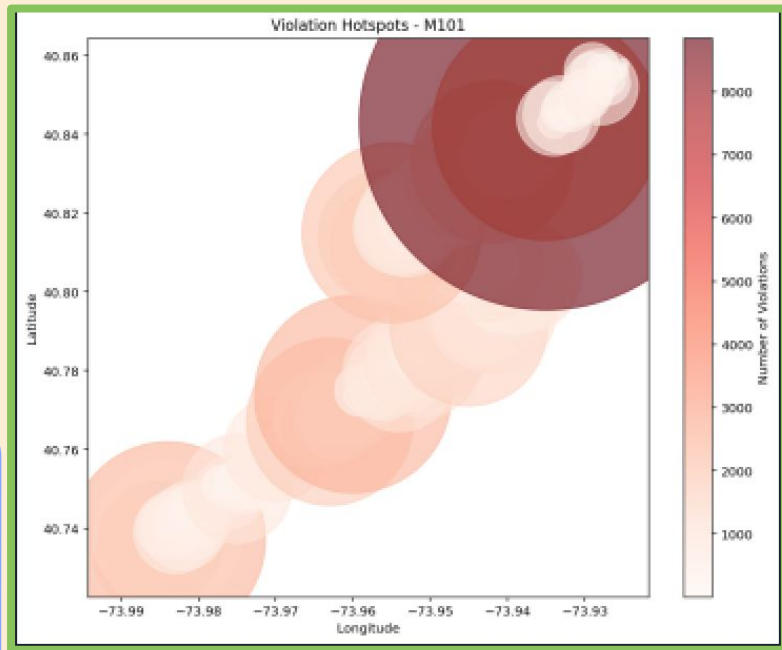

What we did:

- Imported the raw dataset for the M101 bus route; filtering specifically for exempt violations
- Grouped violations by Vehicle ID and location, revealing the top 10 repeat offenders and key violation hotspots

Index	Vehicle ID	violation_count
2835	1feaad876c46cfe1cc4ee357e410ec2054c5c231d268169dfd9527c1c084a80	1340

40.738	-73.984	1398
40.834	-73.941	1394

What we created:

- Created a bubble heat map showing violation hotspots on the M101 route using matplotlib in Python. Created another heatmap on Kepler.Gl of exempt violations on M101.
- The hotspots are concentrated along the Washington Heights/ Harlem areas of Upper Manhattan!

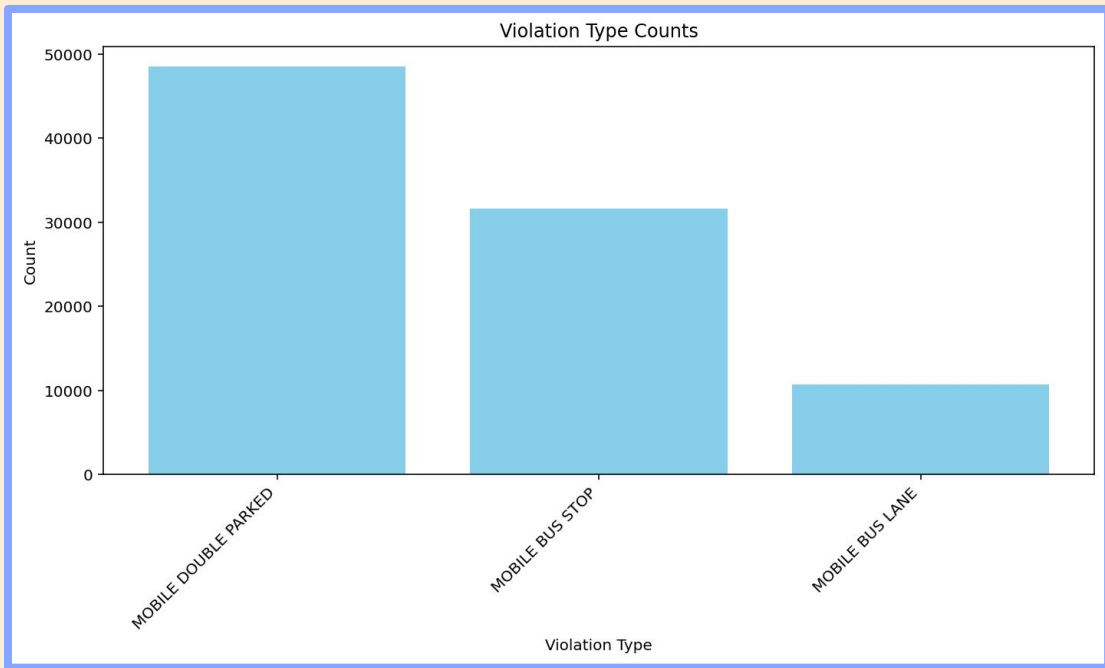

What we found:

Our Analysis:

- Vast majority of exemptions are violations made by emergency vehicles (42.31%) and commercial vehicles (33.06%).
- Manhattan is a busy area where many businesses and residents use commercial services.
- The M101 route passes by several hospitals, precincts, etc. Manhattan being a highly population dense area would lead to more use of emergency services.

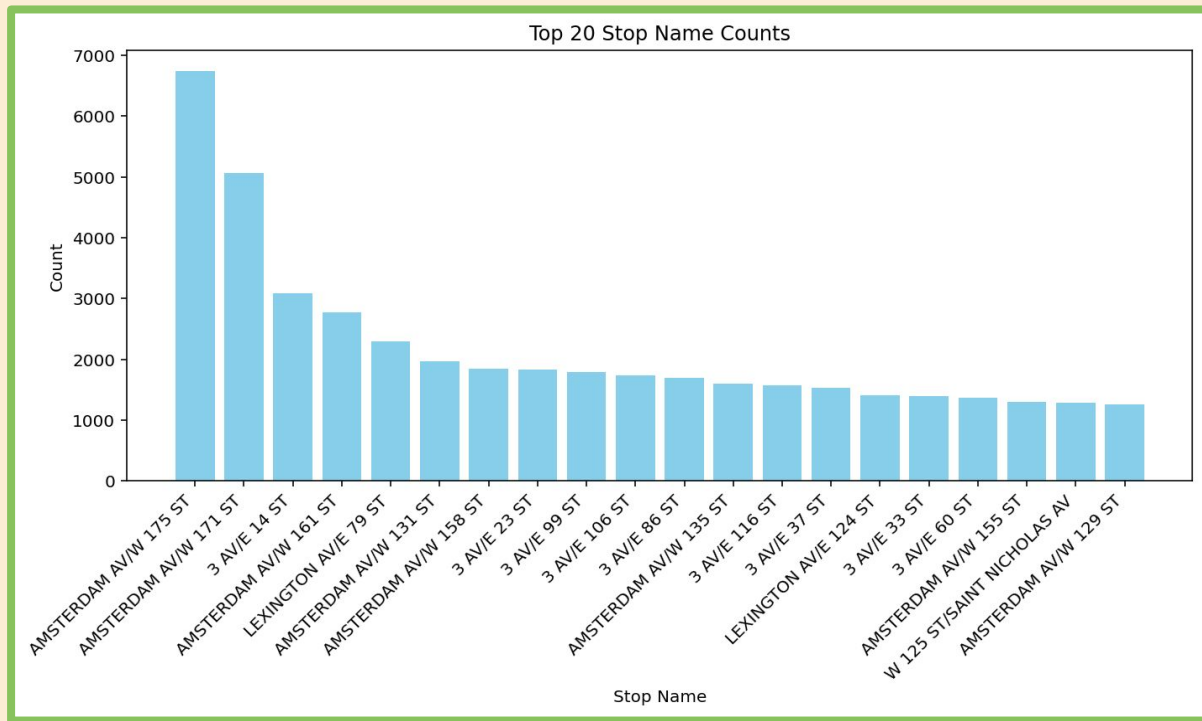

What we found:

Our Analysis:

- We found that 53.42% of the violation types are due to vehicles being double parked
- The M101 Bus route was predominantly created on narrow one way streets. Many of these streets are also heavily congested, tourist zones.
- This likely causes higher rates of double parking with many offenders parking in bus lanes.

What we found:

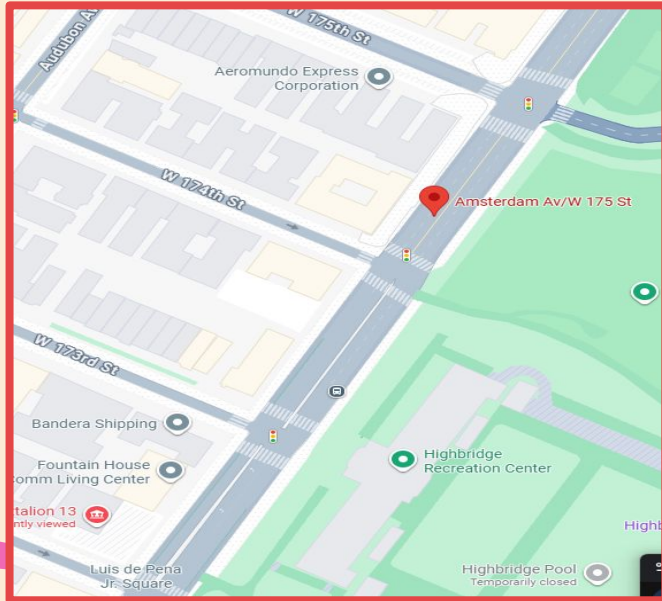

Our Analysis:

- We found that 45% of the violations occur along 3 Ave
- 40% of the stop name's are along Amsterdam Ave

Violation Hotspots: A Closer Look

Amsterdam Ave/ W 175 st & Amsterdam Ave/ W 171

- Over 11,000 Exempt Violations combined
- Nearby: FDNY EMS Battalion 13
- Major EMS Service Location. Many Ambulances are parked on Amsterdam ave in surrounding blocks which blocks bus lane.

Frequent Violators in this area (Amsterdam /W 175 st):

Tr	Vehicle ID vehicle_id	≡	#	count_vehicle_id count_vehicle_id	↓	≡	Tr	Violation Status violation_status	≡
	6d7caef8bf15e2bf8d46aa1e6dd8c0d...		522					EXEMPT - EMERGENCY VEHICLE	
	2a8ac01b157a97b3c124cf33322e71c...		487					EXEMPT - EMERGENCY VEHICLE	
	ebabc585284d95a10b6b45730c38fa...		481					EXEMPT - EMERGENCY VEHICLE	
	cbebd9b5a63416b9c246a35d3b5fc3...		390					EXEMPT - EMERGENCY VEHICLE	
	80e7bae594e62aaaf4ed702b8230dfd...		370					EXEMPT - EMERGENCY VEHICLE	
	0e92016a483877f5c62115578a6424...		359					EXEMPT - EMERGENCY VEHICLE	

- Many of the exempt offenders in this area are repeat offenders.
- Most of the high recidivists, were exempt as emergency vehicles and their violation type is Mobile Double parked.
- From this we can infer that they are stationed ambulances in the bus lane that are constantly being flagged by the ACE System.

Violation Hotspots Continued:

3rd Ave/ E 14st

- Over 3,000 Violations
- Nearby: NYPD Transit Police Precinct 7, Urgent Cares (City MD, Mount Sinai). Area is also home to many commercial businesses + a heavy tourist area.
- Ambulances, police cars, and Commercial Vehicles frequently use the Bus lane

Frequent Violators in Area:

Vehicle ID vehicle_id	# count_vehicle_id count_vehicle_id	Violation Type violation_type	Violation Status violation_status
176827791f47edf76d0ec3b9a1fb39c...	154	MOBILE BUS STOP	EXEMPT - EMERGENCY VEHICLE
c65f9ae5bcb3a5ebd8c0cabfb775d01...	62	MOBILE DOUBLE PARKED	EXEMPT - COMMERCIAL UNDER 20
28d5db97c873ef7c0baf48e363edeee...	36	MOBILE BUS STOP	EXEMPT - OTHER
2a38d5cc05cfeb0a4412c093c658dea...	30	MOBILE BUS STOP	EXEMPT - EMERGENCY VEHICLE
3ef404eb6ff5bca9d2d0a02fe65bcc5...	27	MOBILE DOUBLE PARKED	EXEMPT - COMMERCIAL UNDER 20

- Similar to the previous hotspot, many frequent exempt violators have racked up a large amount of violations.
- This hotspot shows more diversity in both violation type and status. Which reflects back to the diverse mix of commercial and emergency service locations in the area.

Hotspot Takeaways:

- The hotspots we took a closer look give us insights about why violation exemptions tend to occur on the M101 route. There are dozens of hospitals, FDNY Ladders, and Police Precincts along the route from north to south. This has led to a high count of exempt emergency vehicles.
- M101 Route also passes by heavily congested and heavy commercial areas which has caused a high count of exempt - Commercial under 20 vehicles.
- Many exempt offenders are repeat offenders. These repeat offenders use the bus lanes as a part of their operational activities (ambulances, police cars, etc), since their violations are waived they are not deterred from stopping.
- While these geographical, operational, and urban features can't necessarily be changed - We can change the way we gather, collect, and analyze the M101 Ace program Data.

Prime Times for Violations:

- You can see the hours when buses or vehicles are most likely to commit violations. In this case, the 8–12 AM morning peak likely corresponds to rush-hour traffic.
- Transit authorities or enforcement agencies could use this information to deploy inspectors or cameras more efficiently during peak violation hours.
- Operational insights – if certain bus routes or stops have more violations in the morning, it might indicate scheduling conflicts, traffic congestion, or enforcement gaps.

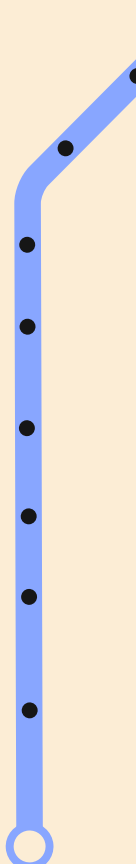

Comparing Exempt vs Issued Violations

- Based off the graphs, exempt repeat offenders have much higher recidivism counts than non-exempt repeat offenders.
- This highlights that the ACE program has been successful at lower recidivism rates for vehicles who actually had violations issue.
- On the other hand, exempt repeat offenders are skewing the data set by constantly being flagged. Many of these exempt repeat offenders are simply engaging in their daily operational activities and stopping these critical activities would be unrealistic. Thus, this points to the important of properly filtering the ACE Program data so that the actual impacts of the program on regular violators are clearer.

Key Issues

- **Emergency vehicles dominate:** 29% of 312k captures; mostly ambulances, fire trucks, NYPD.
 - **Hotspots:** Amsterdam Ave & 3rd Ave—near firehouses, depots, police stations, hospitals.
 - **Redundant records:** 3,600+ duplicates from cameras logging same vehicles.
 - **Commercial exemptions:** Less frequent; clustered near depots & service corridors.
 - **Result:** Emergency stops → mostly exemptions; residential/commercial → more violations.
- 

Solutions

Emergency Vehicles Dominate Exemptions

Reasoning: Firehouses, police stations, hospitals, EMS depots along Amsterdam Ave & 3rd Ave → Frequent bus lane usage

Solution: Classify emergency exemptions separately in data, geo-fencing around emergency facilities → Flag “Emergency Exempt”

Hotspot Areas

Reasoning: High density of FDNY, MTA depots, NYPD precincts, hospitals → Cameras constantly triggered

Solution: Optimize camera placement to reduce unavoidable exempt captures
Split reports into emergency hotspots vs. commercial hotspots

Redundant Vehicle Logging & Deduplication

Reasoning: Current frame-based system logs every plate detection

Solution:

1. Event based logging: Group captures of same vehicle within a short window
2. Deduplication rules: Combine repeated captures at same spot within x minutes
3. Integrate transportation vehicle identification data : Flagged vehicles go into Exempt Emergency Vehicles category, reducing repetitions

A pictures always reinforces the concept

Images reveal large amounts of data, so remember: use an image instead of a long text. Your audience will appreciate it

An abstract graphic on a light beige background. It features several thick, curved lines in pink, blue, green, red, and yellow. Small black dots are scattered along these lines. Some lines end in open circles of the same color. The lines and dots are arranged in a way that suggests movement or data points.
